Revision history 17

A. Recent revisions

2026-05: Added subdivision.

B. Types of headings covered by the pattern

Headings for individual plants and crops and groups of plants and crops, including algae, fungi, and lichens, at all taxonomic levels, established using either common or scientific names. The pattern also covers headings for extinct and fossil plants.

Examples:

Camellias
Eucalyptus alba
Rice
Basidiomycetes
Forage plants
Fruit
Weeds
Yeast fungi
Davis peppergrass
Franklinia
Gymnosperms, Fossil

C. Types of headings not covered

The category does not include the headings ***Plants***; ***Plants, Cultivated***; ***Crops***; and ***Field crops***.

D. Conflicts

D.1. General rule

Any subdivision listed here can be used as a free-floating subdivision under any heading belonging to the category if it is appropriate and no conflict exists in the subject authority file. Subject authority records may exist for headings employing variant phrases or subdivisions equivalent to subdivisions on this list.

D.2. LC practice

If an exceptional variant form is to be retained, make a UF reference from the equivalent free-floating subdivision form following the procedures in H 195 if the reference does not yet exist. Otherwise, submit a proposal to change the variant form along with all bibliographic records requiring correction following the procedures in H 193.

F. List of form subdivisions

LC practice: As stated in H 1075, Library of Congress catalogers will no longer use form subdivisions. Instead assign an appropriate term or terms from Library of Congress Genre/Form Terms (LCGFT) to bring out the form(s) and/or genre(s) of the resource being cataloged. The form subdivisions maintained on this list are not available for use by LC catalogers. Catalogers at institutions external to LC may use them as dictated by their own institutional policies.

Subdivision	May Subd Geog	Notes
$v Catalogs and collections	Yes	Use as a form subdivision under plants for catalogs or collections of those plants.
$v Classification		Use as a form subdivision under plants for works that consist of a systematic breakdown of a subject into its constituent categories or subtopics.
$x Diseases and pests $v Identification		Use this subdivision combination as a form subdivision under individual plants and groups of plants.
$x Germplasm resources $v Catalogs and collections	Yes	Use this subdivision combination as a form subdivision under individual plants and groups of plants.
$v Gift books		
$v Identification		
$v Nomenclature		
$v Nomenclature (Popular)		
$v Nomenclature (Popular) $x French, [Italian, etc.]		
$x Seeds $v Identification		Use this subdivision combination as a form subdivision under individual plants and groups of plants.

Revision history

2026-05: Added subdivision.

2026-04: Updated template. Clarified text. Separated general and form subdivisions. Added instructions related to LCGFT implementation.
